ONTARIO

Constructing Ontario's Future

MEDIA ADVISORY

How much drinking water is being lost because of leaky and broken pipes in water systems across Ontario?

How much are consumers paying for this water – water that never reaches their taps?

How much energy is being wasted by pumping this water into the ground?

What are the environmental and social impacts of this deteriorating infrastructure?

A study by the Residential and Civil Construction Alliance of Ontario (RCCAO), being released tomorrow, will answer these questions, put forward solutions, and address the key issues.

Wednesday, June 10

**9:00 a.m. – News release distributed by CNW
– Full study available at www.rccao.com**

**10:30 a.m. – Interviews at a downtown watermain construction site
Southeast corner of St. George Street and Lowther Ave.
Toronto**

RCCAO Executive Director Andy Manahan and University of Toronto professor Tamer El-Diraby, author of the study, will be available for interviews at the construction site.
